

Find Your Ductwork's Happy Place

Engineered With Strategically Located Openings

The XJ 85® is the first engineered I-joist with pre-cut openings that enable you to run ductwork in conditioned spaces, instead of throughout the attic. It's lightweight, easy to install, and it can help lower heating and cooling loads. It's simple. Less time. Less energy. Happier customers.

Pre-Cut Openings That Are Truly Revolutionary

The XJ 85 provides increased architectural and construction versatility with wide openings that are close together and close to the end of the beam. The openings can easily accommodate plumbing, wiring, and HVAC while saving time on planning and cutting holes in the joist. Plus, the rounded corners of the openings make for smooth, fast installation.

Lower Installed Cost

Reduced time, labor, and callback costs can help build profit into your next project. Lightweight construction and wider on-center spacing helps reduce labor and materials. The XJ 85 is available in 16" depth and standard lengths from 6' - 26', and is trimmable on-site to fit perfectly.
